GOVERNMENT SERIAL RECORDS

1967

U. S. DEPARTMENT OF AGRICULTURE

Agricultural Stabilization and Conservation Committee

Nashville, Tennessee

FOREWORD

This annual report compiled by the Tennessee State ASCS Office provides a summary of the operation of our County Offices in 1967.

Agricultural Stabilization and Conservation Committees are responsible for the administration of programs which directly or indirectly affect the welfare of each consumer in the Nation. These programs are designed to help maintain a balance between production and consumption, stabilize prices of certain commodities, conserve soil and water, and preserve the forests in our Country.

Our appreciation is extended to ASC county and community committeemen, county office personnel, and representatives of other agricultural agencies and farm organizations who contributed to the success of our farm programs in 1967.

TENNESSEE STATE ASC COMMITTEE

Edward Jones, Chairman

Crosby Wright, Member

James D. Plant, Member

Dr. V. M. Darter (Agricultural Extension Service)

Walter S. Nunnally, State Executive Director

ACP - CAP - CCP - CRP - ALSCP PROGRAMS

FOREWORD

ACP --

The Agricultural Conservation Program is a voluntary cost-share program available to all producers of agricultural products. This program represents a partnership between the farmer and the Federal Government for installing needed conservation practices on farmland. Cost-sharing is normally on a 50-50 basis. The partnership is thus involved in conserving and enhancing our natural resources (soil, water, forests and wildlife) and thereby insuring that present and future generations will have an ample supply of food, fiber and other necessities of life.

CAP --

The Cropland Adjustment Program is designed to divert the use of crop land from the unneeded production of feed grain and allotment crops on a long-term basis to needed conserving uses. This land use adjustment is accomplished through agreements with eligible producers for periods of from 5 to 10 years. The producers receive adjustment payments for diverting the base crops plus cost-sharing for performing needed conservation practices on the diverted acres. Another program feature permits free public access to the diverted acreage for hunting, fishing, hiking or trapping. The landowner receives an additional small Federal payment annually for granting this privilege. In addition to agreements with private owners, the CAP provides for public entities to participate in the program through a provision known as "Greenspan." The "Greenspan" feature of the program provides for grants to public entities for acquisition of eligible land to be converted from intensive cropping use to open space and recreation uses.

CCP --

The Cropland Conversion Program is a long-term diversion and conservation program similar to the CAP but with some different provisions for use of the land being diverted from crop production. The program is also limited to certain designated counties on a "pilot test" basis whereas the CAP is open to all counties. Annual adjustment and cost-share payments are made to eligible producers under long-term agreements (3 to 10 years) similar to those in the CAP. However, adjustment payment rates are lower under the CCP because of less restrictive land uses authorized on the diverted acres. Neither the public access nor Greenspan provisions authorized for the CAP are applicable to the CCP.

CRP --

The Conservation Reserve Program is a part of the Soil Bank Program which was designed to divert cropland from soil bank base crops to long-term conserving uses. The program was replaced by the Cropland Adjustment Program. Under the CRP farmers receive annual diversion and cost-share payments pursuant to long-term contracts (3 to 10 years) for specific land use adjustments. All contracts with Tennessee farmers under this program will expire at the end of 1969.

ALSCP --

The Appalachian Land Stabilization and Conservation Program is authorized only in certain designated counties in the Appalachian states. The program is designed to provide land stabilization, erosion and sediment control, reclamation and conservation treatment measures on land in the Appalachian area. This is accomplished through long-term cost-sharing contracts (3 to 10 years) with landowners and operators in the designated areas. Federal cost-shares range up to 80 percent of treatment costs. Preference is given to "needy persons" in the approval of contracts. Cost-sharing is limited generally to not more than \$50 per acre for a maximum of 50 acres per farm. Counties designated for this program are usually in areas having the greatest economic growth potentials.

ECM --

Emergency Conservation Measures are authorized under the ACP in designated disaster areas, where needed, to rehabilitate farmland damaged by natural disasters.

In 1967 special assistance was offered in 11 counties to correct damage to farmland caused by excessive rainfall and flooding. Available emergency funds permitted farmers in the 11 designated counties to repair or correct land damages caused by the flood. Without emergency assistance the newly created conservation problems would have impaired the land, affected the productivity capacity and would have been so costly that the farmers would have been unable to carry out the needed conservation.

WATERSHED PROGRAMS

Since the inception of the Small Watershed program (PL-566) in Tennessee, the ACP has assisted in watershed program development by providing cost-sharing on conservation practices needed in the watersheds consistent with available funds.

Assistance has been provided by county ASC committees out of the regular allocation of program funds and by special reserves allocated to selected counties with active watershed programs.

The amount of ACP cost-sharing for practices carried out in watersheds is shown in the following tables.

Since ACP cost-sharing on approved practices represents about half of the cost, the approximate total farmer-ACP investment is about twice the ACP amount shown in the tables.

RESOURCE CONSERVATION AND DEVELOPMENT PROJECT

The Hull-York-Lakeland RC&D Project is the only such project approved in Tennessee to date. Cost-sharing under the 1967 ACP contributed significantly to the accomplishment of project objectives. The extent of ACP assistance in the project undertaking is summarized in the table following the watershed summary.

RC&D projects represent comprehensive plans for coordinated action on an area basis for the orderly development, improvement, conservation and utilization of all natural resources of the area in order to provide employment and other economic opportunities for all the people.

FEED GRAIN PROGRAM

FOREWORD

The Feed Grain Program is designed to continue improvement of farm income, provide a basis for stable livestock prices at a level fair to producers and consumers and maintain adequate but not excessive reserves.

The program is voluntary, and producers with feed grain bases who participate in the program and comply with program regulations become eligible for diversion and price support payments and price support loans.

Farm feed grain bases were established on the average acreage of feed grains produced on the farm during the base period of 1959 and 1960.

The flexibility of the program allows variations for each year in determining the amount of the feed grain base needed to be diverted from the production of feed grains.

The following charts are a condensed summary of participation, by counties, in the 1967 Feed Grain Program in Tennessee.

WHEAT CERTIFICATE PROGRAM

FOREWORD

This program has the same objectives as the feed grain program. Production is regulated by varying the farm allotments. While a diversion program is authorized, it was not offered for 1967 since allotments were increased to bring about a needed increase in production.

Participating farmers who complied with allotments were eligible for price support loans and marketing certificates on their production.

Marketing certificates were authorized on domestic production only. These participating farmers were eligible for certificate payments on the projected production of their wheat acreage up to 35% of the farm allotment.

The law required domestic certificates be issued for no more than the expected food use. The certificates were valued at the difference between \$1.25 and parity as of July 1, 1967.

UPLAND COTTON PROGRAM

FOREWORD

This program, designed to make any needed adjustment in supplies also provides for keeping cotton competitively priced and making price support and diversion payments to farmers who voluntarily participate and make the required diversion from cotton to conserving uses.

The program's "one price" cotton provision is provided by law to keep U. S. cotton prices more competitive with foreign cotton and prices of foreign and domestic synthetic fibers. The objective of this provision is to achieve and maintain larger markets at home and abroad for U. S. cotton.

This program is also engineered to move cotton into the market rather than in to government storage, thus reducing government expenditures. This type program authorized through 1969 has already reduced government stocks to manageable levels and now that surpluses are gone, a demand exists for more cotton particularly the better qualities.

This program was dependent upon approval of 2/3 of the growers voting in a referendum for marketing quotas on the 1967 crop. Growers overwhelmingly voted such approval.

Special provision is made whereby small farms with allotments of 10 acres or less or a projected production of not more than 3600 lbs. may participate and earn payments and qualify for price support without making any actual diversion. Participating producers, except small farms, were required to divert a minimum of 12.5% of their allotment. Maximum diversion was 35% of the allotment.

Price support rates were 11.53¢ per lb. on the projected production of the domestic allotment (65% of the farm allotment) or the planted acreage if less than 90% of the domestic allotment.

Diversion payments were based on 10.78¢ per pound for the projected production of the diverted acreage. Small farms actually diverting 35% in effect received double diversion payments.

PRICE SUPPORT PROGRAMS

FOREWORD

Farmers in Tennessee received price support through loans and purchases on barley, corn, cotton, soybeans and wheat. Tobacco was supported through advances from producer associations.

Cotton loan notes were prepared at the ASCS county offices and by approved cotton loan clerks located at banks, gins and cotton companies. All loans were disbursed by the county offices. Producers whose notes were prepared by approved cotton loan clerks could obtain loan advances from the clerk or his employer by naming the lender payee of the note. Loan advances from approved cotton cooperative marketing associations were available to members of the association.

Cottonseed was supported through a product purchase program. The program is based on CCC's offer to purchase cottonseed products from participating oil mills in return for their obligation to pay not less than the support price for cottonseed. In any locality where this program would otherwise be ineffective CCC may purchase cottonseed directly from producers and ginners. Cottonseed sold above the support price throughout the 1967 ginning season.

Wool is an essential and strategic commodity not produced in sufficient quantity in the United States. It is the policy of Congress to encourage an annual domestic production of about 300 million pounds of shorn wool. The Secretary is directed to establish an incentive price for shorn wool which will encourage larger production. In order to encourage producers to sell wool for the best price possible, the incentive payment to the individual is determined by applying the rate to his net sales proceeds. Payments are also made for wool on lambs sold before their first shearing.

In addition to price support operations, farmers may secure loans from ASCS to provide storage facilities and needed handling and drying equipment to store grains and soybeans that are eligible for price support. These loans are for five years, are payable in four annual installments, and bear interest at 4%.

TOBACCO PROGRAM

FOREWORD

Marketing quotas and acreage allotments were in effect for burley, fire-cured and dark air-cured tobacco. This is a means of controlling production and assuring the farmers of reasonable price for the tobacco under the Price Support Program. The Secretary proclaims quotas each year which will be in effect only when two-thirds of those voting in a referendum have favored marketing quotas. On February 25, 1965 growers favored quotas on burley for the three year period, 1965, 1966 and 1967. From February 13, 1967 through February 17, 1967, in a referendum by mail ballot, growers favored quotas on fire-cured and dark air-cured tobacco for the three year period, 1967, 1968 and 1969.

TENNESSEE BURLEY TOBACCO STATISTICS

Crop Year	No. of Allot-ments	Allot-ment Factor	Average Size Allotment	Total Allotted Acreage	Total Harvested Acreage	Total Production	Yield Per Acre	Average Price Per Acre	Average Price Per Cwt.	Gross Price

PEANUT PROGRAM

FOREWORD

Peanuts are under acreage allotments and marketing quotas. Such quota is established each year by the Secretary of Agriculture. They are effective only when at least two-thirds of the growers voting in a referendum favor such quotas. This is a means of controlling production and guaranteeing the farmer a favorable price for his peanuts through the Price Support Program. On November 23, 1965 growers voted in a referendum favoring quotas for the years, 1966, 1967 and 1968.

COMPLIANCE OPERATIONS

FOREWORD

The Secretary of Agriculture is required by law to provide for determining acreages of feed grains, wheat, cotton, peanuts, tobacco and rice, when programs are in effect, and to make such other acreage and land use findings as are necessary to determine compliance with the applicable program provisions.

For many years, compliance determinations were made by making farm visits to measure acreages of crops and land uses. Beginning in 1965, a different approach was started which makes the farm operator responsible for reporting compliance. This method is known as Compliance by Certification. It was used in 42 counties in Tennessee in 1967, and will be used in 52 counties in 1968.

Compliance by Certification is accomplished by requiring participating farmers to report the acreage of crops and land uses for various programs. It applies to wheat, feed grain, cotton, rice and peanuts.

A farmer's report of acreage may be accepted in lieu of a farm visit in counties not authorized to use Compliance by Certification where the producer can certify to known acreages established previously.

A portion of the farms for which acreages are reported or certified is visited for administrative control purposes to check the accuracy and reasonableness of reported acreages.

Measurement service is available to farm operators upon request and at a reasonable cost. This service may be used to determine the amount of crop to be planted, or the amount of the crop already planted, or to establish official acreages for cropland fields that have not been measured previously. The known acreages can be used to reduce cost of production of the crop and assures full program compliance.
